

Student Submission File

This PDF is a dummy student submission file used to test the faculty submission and evaluation workflow.

Student Name	Abdul Rehman
Registration No	NUM-BSCS-2024-01
Course	CSC-224 - Database Systems
Assessment	Assignment #2 - SQL and Normalization
Submission Status	Submitted
Upload Time	Demo Timestamp

Submitted Work

Question 1: Convert the given ERD into relational schema and identify primary and foreign keys.
Answer: The main entities are User, Student, Faculty, Department, Program, Batch, Section, Enrollment, Registered Course, Assessment, Submission and Evaluation. Each entity is converted into a separate relation with a suitable primary key. Foreign keys are added according to relationships in the ERD.

Question 2: Explain how normalization is applied.
Answer: The schema satisfies 1NF because each table stores atomic values. It satisfies 2NF because partial dependencies are removed by separating composite relationships into independent tables. It satisfies 3NF because transitive dependencies are removed by using lookup and relationship tables such as Department, Program, Batch Program, and Teacher Assignment.

Declaration

This is a dummy submission document for testing file display, submission status, AI checking, and evaluation report generation in the GUI.
